

Brief Description of the Drawings

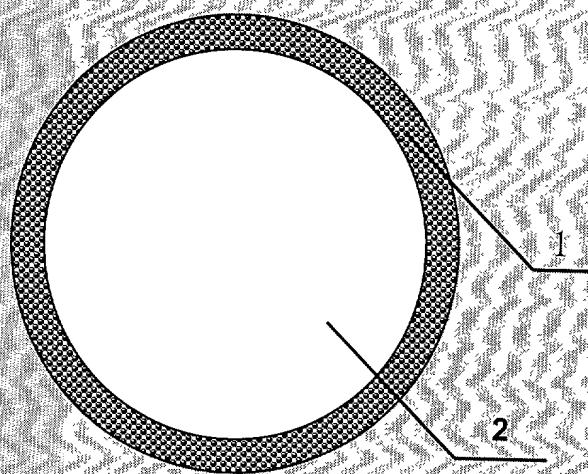

Fig. 1

Fig.1 Structure of carriers

1. The Mg-Fe-NaOH composition layer located on the outer surface of carrier
2. Pure Mg located in the center of carrier

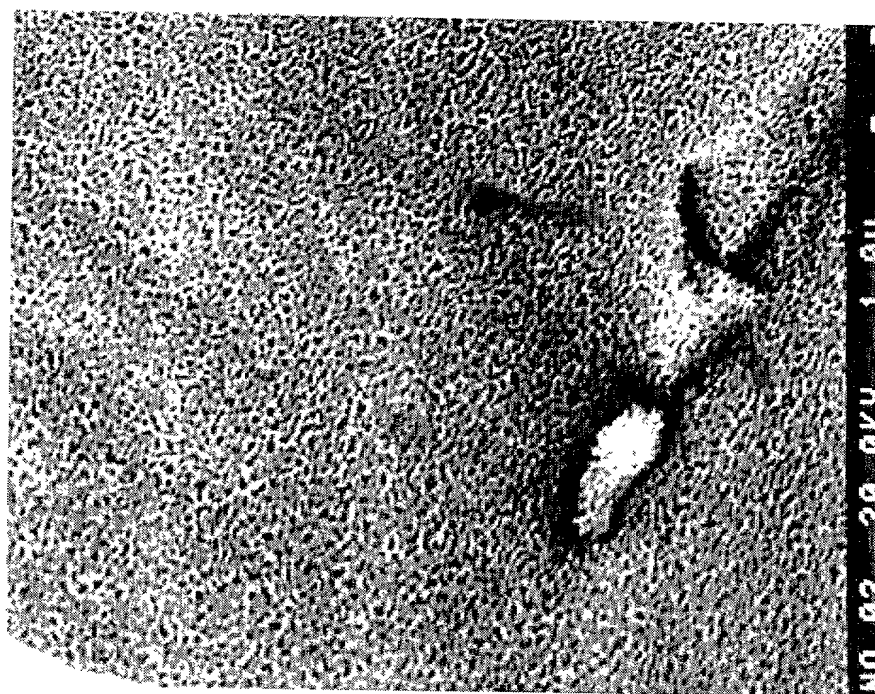

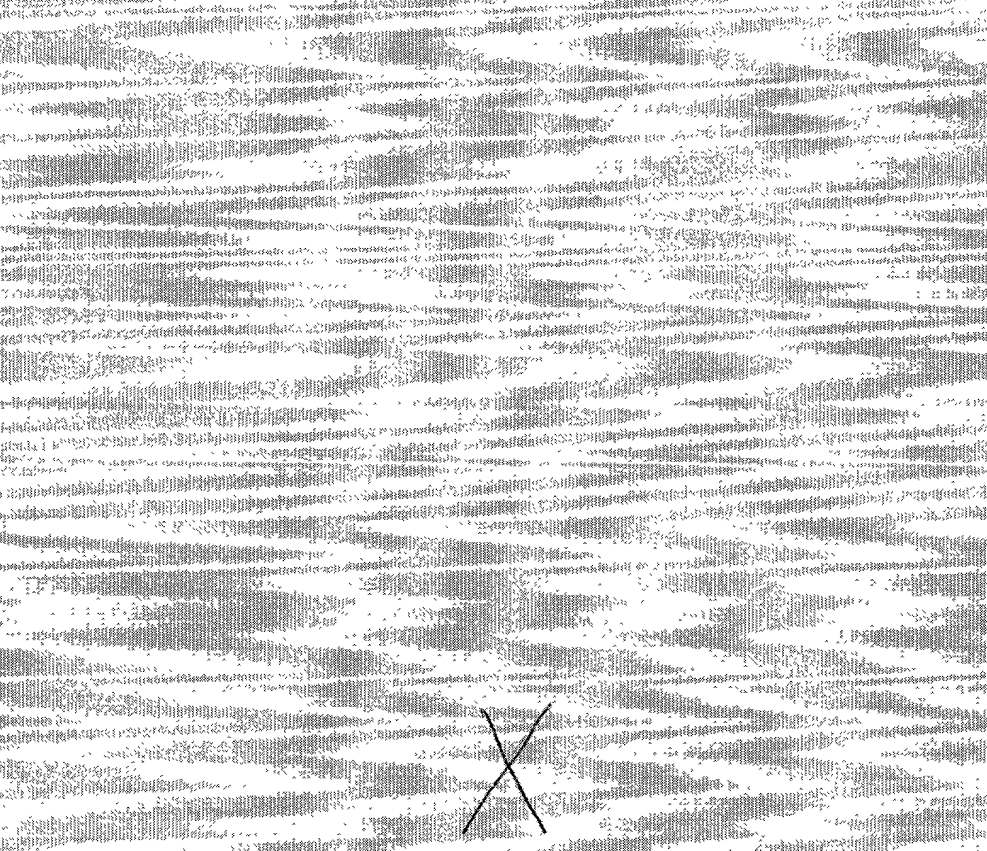

Fig. 2

Fig.2 Surface metallography characteristics of carriers by the use of EPMA (Electric Probe Micro-Analyzer)

The bottom portion of the page contains several lines of text, which are mostly illegible due to the heavy noise and degradation. Some faint, scattered characters and small groups of text are visible, but no coherent sentences or paragraphs can be discerned.
